DEPARTMENT OF LABOUR

NO. R. 52 26 JANUARY 2018

OCCUPATIONAL HEALTH AND SAFETY ACT, ACT 85 OF 1993

LIFT, ESCALATOR AND PASSENGER CONVEYOR REGULATIONS INCORPORATION OF THE CODE OF PRACTICE FOR INSPECTION AND TESTING OF LIFT.

The Chief Inspector of Labour intends, in terms of section 43 of Occupational Health and Safety Act, Act 85 of 1993 on the recommendation of The Advisory Council for Occupational Health and Safety, to incorporate the code of practice for inspection and testing of lift in to the Lift, Escalator and Passenger Conveyor Regulations, 2010.

Interested persons are invited to submit any substantiated comments or representations on the proposed code of practice to the Director General, Department of Labour, Private Bag x 117, Pretoria, 0001 (For the attention of the Chief Inspector: Occupational Health And Safety), within 90 days of publication of this notice.

CODE OF PRACTICE FOR INSPECTION AND TESTING OF LIFTS

d. Motor data plate details		PH/	V/ A				
e. What is the actual running currer	nt with full load?	А					
f. Type of motor overload?		6A Thermal circui	t breaker				
	LIFT NO.:						

3

Sensitive edges		
a. Does the platform sensitive edge prevent upward movement of the lift when operated at both ends and at mid point?	Yes	No
b. Does the platform sensitive edge prevent upward movement of the lift when operated on all three sides of the platform?	Yes	No
Isolation keyswitch		
a. Does the isolation keyswitch disable the lift?	Yes	No No
b. Do the landing isolation keyswitches disable the adjacent call button?	Yes	No
Levelling accuracy		
With the rated load on the platform, does it level to within ±1 mm of the landings served?	Yes	No
Liftway protection		
a. Is the liftway protection recommended in adequate?	Yes	No
b. Is a stop switch provided in the pit and on the carriage?	Yes	No
c. Do the stop switches prevent movement of the car when operated?	Yes	No No
Doors and interlocks		
a. Are all enclosure doors/gates fitted with interlocks?	Yes	No No
b. Do the interlocks operate correctly?	Yes	No No
c. With the platform between floors (out-of-door zones), are the doors/gates prevented from opening via the normal platform and landing controls?	Yes	No
d. With any door of the lift open, will the lift travel in either direction?	Yes	No
Clearances		
Are the liftway clearances as recommended in?	Yes	No No
LIFT NO.:		

<u>Notices</u>				
a. Is the "emergency lowering" notice	e fitted to the hydraulic pump unit?	Yes		No
b. Is the correct load plate fitted on t	he platform?	Yes		No
c. Is the "electrical" warning notice fi	tted to the controller cabinet door?	Yes		No
d. Is the notice fitted to the switch fur platform is at the lowest level"?	se box "Switch off only when the	Yes		No
e. Is the emergency release label fitt	ed to both manual door locks?	Yes		No
Isolation keyswitch				
a. Is the manually operated scotchin	g device available?	Yes		No
b. If so, does the device operate cor	rectly?	Yes		No
Emergency back-up supply				
a. Does the battery back-up supply I	ower the lift and unlock the door?	Yes		No
b. Is the platform alarm operational?				No
<u>Limit switches</u>				
a. Do the terminal stopping switches levels?	stop the lifting platform at terminal	Yes		No
b. Does the ultimate limit switch stop	the lifting platform when operated?	Yes		No
c. State the overtravel of the platform operated.	n when the ultimate limit switch is			mm
Hydraulic drive unit tests				
a. With rated load in the car and at h hydraulic fluid pressure:	ighest floor level, state the static		kPa	
b. Provide the following details of the

13 Balance and levelling					
13.1 From the measurements recorded in item 11, is the balance satisfactory?					
13.2 State the percentage of the balance:					
a) design: b) actual:					
13.3 Does the lift stop within the levelling accuracy recommended by the manufacturer?					
14 Insulation resistance to earth					
NOTE The value should not be less than 0,5 M Ω at 500 V when measured using a calibrated instrument.					
14.1 Lift motor: $M\Omega$					
14.2 Safety circuits: MΩ					
14.3 Power systems: $M\Omega$					
15 Earthing					
15.1 Is the maximum continuity resistance to earth less than Yes 0,5 MΩ?					
15.2 Is the car connected to the controller earthing terminal by Yes a separate conductor ≥ 0,75 mm ² ?					
16 Protection of conductors					
16.1 Is the fixed wiring in conduit (or trunking, or fittings that Yes ensure equivalent protection) throughout?					
16.2 If not, do the cables comply with 5.9 of SANS 50081-31?					
17 Phase reversal and phase failure device					
If fitted, does the phase reversal and phase failure device Yes operate correctly?					
18 Car roof control station (if fitted)					
18.1 Speed up: m/s Speed down: m/s					
18.2 Does the design and operation of the car roof station Yes comply with 5.10.2.3 of SANS 50081-31?					
NOTE 1 Where required, the car roof should be fitted with a balustrade (see 5.5.1.6 of SANS 50081-31). NOTE 2 The car roof should fulfil all lift requirements of 5.5.1.6 of SANS 50081-31.					

19 Pressure	
19.1 Pressure at which the pressure relief valve is operated (see G.2.5 of SANS 50081-31): KPa	kPa
19.2 Is the integrity of the pipe work satisfactory?	Yes No
19.3 Is the relief valve secured against unauthorized interference?	Yes No No
19.4 Does the check valve hold the car with the rated load at floor level?	Yes No No
19.5 Is a functional rupture valve in place?	Yes No
19.6 Does the operation of the manual lowering valve lower the car at a speed not exceeding 0,3 m/s?	Yes No No
19.7 In case of an indirect acting lift, when the car is manually lowered onto a prop, does a slack chain or slack rope condition occur?	Yes No No
19.8 In the case of an indirect acting lift, does the slack chain/rope switch or pressure switch prevent operation of the lift until pressure has been re-established by resetting the switch?	Yes No No
19.9 Have precautions been taken against overheating and contamination of the fluid?	Yes No
20 Anti-creep	
20.1 Does the anti-creep device automatically prevent the car from moving away from the floor level by more than 75 mm when the car is within a zone which extends 0,12 m below the landing level (see G.2.5 of SANS 50081-31)?	Yes No
20.2 Does the device operate with the car landing doors both open and closed?	Yes No
20.3 Do the electrical protective devices (except those for the pump motor) and the car stop switch prevent the anti-creep device from operating correctly (see G.2.5 SANS 50081-31)?	e Yes No
20.4 Does the isolating switch in the machine room bear the legend "switch to be kept closed at all times, except during	Yes No

21 Duty cycle test
Does the lift operate satisfactory for a period of at least 0,5 h when running Yes with the rated load, full travel and intermediated stops at a rate of starts at least equal to the number of starts per hour?
If the answer is No, state the reasons:
NOTE It might be necessary to omit the operation of the doors to achieve the required number of motor starts per hour.
22 General
22.1 Are the emergency instructions displayed in the machinery space? Yes No
22.2 Does the emergency lowering system(s) function correctly in Accordance with G.2.5 of SANS 50081-31?
22.3 Has the functioning of the emergency lowering system(s) been Yes demonstrated?
22.4 If the answer to item 22.3 is Yes, to whom has it been demonstrated?
Name:
Organization
22.5 Is the maximum load (e.g. the number of persons, kilograms and Yes identification no.) indicated in the car?
22.6 Does it comply with 7.1.3 of SANS 50081-31?
22.7 Is an overload in accordance with 5.10.2.7 of SANS 50081-31?
22.8 Is the artificial lighting in the machine room adequate for Yes maintenance purposes (see J.4 of SANS 50081-31)?
22.9 Does any artificial lighting in the well comply with 5.2.13 of Yes SANS 50081-31?
22.10 Are the machinery space conditions satisfactory (see 5.3 and J.4 Yes of SANS 50081-31:?
22.11 In the case of an installation without a machine room, are the Yes machine spaces satisfactory and safe?
If the answer is No, state the reasons:

22.12 Are the provisions for ventilating the machinery space adequate (see 5.3.1.4 of SANS 50081-31:?	Yes		No
22.13 State the machine space temperature at the end of the duty cycle test		°C	
22.14 Is the temperature rise acceptable?	Yes		No
22.15 Are the machinery space doors or trap doors or control panels placed elsewhere than in a lockable machinery space fitted with a suitable lock that complies with 5.3 of SANS 50081-31?	Yes		No
22.16 Is there a means of access to all items of lift equipment, in accordance with 5.3 of SANS 50081-31?	Yes		No
22.17 Are the safety notices/instructions specified in 7.1.2 of SANS 50081-31displayed?	Yes		No
22.18 Has a counterweight screen been fitted? If no, refer to 5.2.10 of SANS 50081-31.	Yes		No
22.19 Has a car apron been fitted?	Yes		No
23 Conclusions			
23.1 Is the lift installation complete?	Yes		No
23.2 Are there any other matters that require attention before the installation is put into service?	Yes		No
NOTE Such matters might not form part of the contract for the lift but might the responsibility of others.	form part	of the insta	allation and be
23.3 If the answer to item 21.2 is Yes, provide the details:			
24 Declaration			
I certify that the equipment was thoroughly examined and found to be fr comply with this part of SANS 1545 and the relevant clauses of SANS 500 a correct report of the results.
